

Chien-Chang Chan

Backend Engineer

"keep curious about everything. "

I am a self-driven computer science student keen about learning technologies and realizing ideas with code. I have two years of experience in collaborative software development. In my research, I used tools like opencv, pytorch to realize the automation of data analysis in sports. In addition, I also actively learn the skills required for a back-end engineer, familiarize myself with website architecture, and establish databases, set up servers and so on. Finally I completed a website related to exercise prescriptions. In the process, I also used agile development techniques and used Linux as my main development system. In the future, I will continue to learn new technologies and tools.

Skills

- Cpp
- Python
- MySQL
- MongoDB
- Linux platform

Tools

- Git
- AWS
- Jenkins
- Github Actions
- Apache Maven

Education

National Cheng Kung University

2022 - 2024

Master in Computer Science and Information Engineering

Kaohsiung Medical University

2016 - 2020

Bachelor in Sports Medicine

Projects

- Thesis

Methods and the technology used, results and the final contributions.

- Side Project

Motivation, technology used, difficulties and the solutions, final achievement

Work Experince

Jul 2023 - Oct 2023

job description, helpful experience at work

Intern

Company Name
