WORK EXPERIENCE

OSAN, Taipei

Jan. 2025 - Present

Software Engineer

Go / C / Linux-native / GitLab

- Built NAS features from the ground up, with contributions across study, development, and validation—covering snapshot technologies, Kerberos integration with NFS, and cluster mechanisms with NFS.
- Improved RDMA performance by up to 30%, and resolved a volume listing bottleneck that reduced execution time by up to 66%.
- Automated benchmarking and testing workflows using FIO, Postman, IOMeter, Makefile, and custom scripting.
- Applied in-depth knowledge of storage protocols and technologies including XFS, LVM, snapshot, NFS, iSCSI, Samba, and RDMA, etc.

EDUCATION

National Cheng Kung University, Tainan

June 2022 - Aug 2024

M.S. in Computer Science (GPA: 4.03/4.3)

Relevant Coursework:

Computer Vision and Deep Learning (A+), Software Design (A+), Distribution System Design (A+), Embedded Operating System (A), C# Programming Design (A-), etc.

Kaohsiung Medical University, Kaohsiung

Sep 2016 - Jun 2020

B.S. in Sports Medicine (GPA: 3.6/4.3)

Gained foundational knowledge in human anatomy, biomechanics, and sports injury management, with a focus on physical performance and rehabilitation.

PROJECTS

Image Quality Assessment for Abdominal Ultrasound using Deep Learning

Python / Pytorch / OpenCV

- Developed a CNN-based deep learning model for segmentation and classification of abdominal ultrasound images, enabling automated image quality assessment to assist physicians in diagnosing patients using scanned images.

SKILLS

Programming Language: C, C++, C#, Go, Python

Tools & Others: Git, Postman, Docker, PostgreSQL
